

Seed17 registered weight grid | Augmented training objectives

Actual unsmoothed 40-epoch logs only. Each panel has an independent y-axis range; compare values and labels, not visual slopes.

Segmentation composite: 0.5 BCE + 0.5 (1 - SoftDice), valid letterbox region. Training uses augmented views.

Validation: original-coordinate hard Dice, mean over references then images; already used for development checkpoint selection.

40 committed epochs per D task. MH-0.3 resumed after interruption; discarded physical work is recorded separately. Test remains locked.
