

Seed17 registered development tradeoff | 16 actual M points

Gain retained versus reference harm

Average Dice versus reference harm

All coordinates are unchanged original-image validation metrics, averaged over references within image, then over 223 images.
Labels: RSI/MH/AH .3, 1, 3 are the registered weights; S1/3 and S2/3 are registered Shrink scales. B is context.
Anchor/S0 and D0/S1 coincide exactly; each label retains two points in provenance. Endpoint rings follow the Anchor/D0 flag.
Shrink segments connect observed points for display; they do not represent inferred or evaluated intermediate outputs.
Working-point flags and D0 – 0.002 denote existing eligibility/selection, not proof of efficacy. Development selection reused this validation set; test remains locked.
